Professional Summary

Software Engineer | Backend | AI/ML Enthusiast | Diving deep into scalable systems, APIs, database design, and infrastructure

Willing to relocate: Anywhere

Work Experience

Software Development Instructor

Execute Tech Academy-Lagos, Nigeria

June 2025 to Present

- Spearheaded the development of a job-aligned software engineering curriculum, closing skills gaps for emerging developers by simulating real-world enterprise environments.
- Lead specialized modules on Data Modeling and Database Normalization, teaching students how to design efficient, scalable relational schemas for complex software applications.

Lead Full-Stack Engineer

PearlsByRay-Lagos

January 2025 to June 2025

- Architected and deployed a full-scale e-commerce platform from inception to production, managing the entire lifecycle including database schema design, backend API development, and frontend integration.
- Implemented secure third-party payment gateways with robust webhook handling and idempotency, ensuring 100% transaction integrity and successful order processing for live customers.
- Optimized product indexing and image delivery, resulting in high-speed page loads and a seamless user experience. Established basic monitoring and logging to maintain 99.9% system uptime since launch.

Full Stack Engineer

Anchor Group (NY)-New York, NY

September 2023 to April 2025

- Engineered a robust automated testing framework that reduced production-level critical bugs by 30%, significantly lowering maintenance overhead and improving release velocity.
- Led database schema redesigns and query optimizations that resulted in a 20% improvement in API responsiveness and a direct boost to user experience metrics.
- Partnered with cross-functional teams to ensure clean, maintainable codebases, contributing to high-level code reviews and architectural documentation.

Senior Software Engineer

Freelance-New York, NY

December 2019 to April 2023

- Managed technical delivery for high-stakes international firms (Wedo Technology, Fullscreen for IT), acting as a strategic consultant to translate business vision into functional mobile and web ecosystems.

- Architected concurrent software solutions from prototyping to global delivery, ensuring 100% project alignment with international performance and security standards.
- Led the transition from monolithic structures to optimized, modular architectures, resulting in improved system maintainability and faster query performance.

Software Engineer

Centric Gateway-Lagos, Nigeria

February 2019 to November 2019

- Served as the primary technical consultant for enterprise customers, managing project status and technical proposals to ensure alignment between client expectations and engineering deliverables.
- Spearheaded the optimization of legacy software interfaces and backend logic, resulting in heightened system performance and a measurable lift in client-side satisfaction.

Education

Computer Science (BSc. Ed.)

Lagos State University-Lagos

August 2021 to August 2024

Computer Science (NCE)

Adeniran Ogunsanya College of Education-Lagos

February 2016 to September 2019

Skills

- Javascript
- CSS
- MongoDB
- HTML
- AWS
- System hardening
- Developing and maintaining backend systems
- Implementing APIs
- Incident response
- Scalability
- Kubernetes
- Microsoft Office
- Docker
- Python
- PostgreSQL
- Nodejs
- React
- Expressjs
- Data modeling projects
- Data model design

- Django
- Data Architecture Design (Architecture design skills)
- Database design

Languages

- English and Arabic - Fluent
